DETAILED ACTION

1. This Office Action is the answer to the RCE filed on 1/16/2007.

Status of the claims

2. Claims 1-3, 5, 7-8, and 10-25 are pending.

Allowable Subject Matter & Reasons for Allowance

3. Independent claims 1, 13, 25, and 34 are patentable over the references of Kudo et al. (US Pat. 7,130,743), Robertson (US Pat. 5,354,957), and Yano et al. (US Publication no. 20020161517), because these references do not disclose a system or a method for predicting vehicle operator destination involves receiving vehicle position data, and comparing vehicle position data for a current trip to that of a previous trip to predict a destination for the vehicle. A path to the said destination is then suggested to automatically creates vehicle operator's driving behavior profiles based solely on the navigation data, without utilizing any gap or geo-coding databases/services to convert position data into street addresses, this negates need for a local road database.

Kudo et al. teach a collecting unit collects vehicle position data through a GPS, based on which vehicle movement information is acquired and stored in a storage unit. An action predicting unit predicts destination of vehicle by referring to both movement route up to the current point and information in storage unit, when vehicle is started. The traffic information on predicted destination is acquired from a server and displayed.

Robertson's reference is directed to predicting of elevator traffic using neural network modules to model, learn and predict passenger arrival rates and passenger destination probabilities. This reference does not suggest about regular traffic destination predictions using GPS.

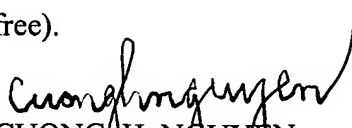

4. Claims 2-3, 5, 7-8, 10-18, 20-21, 23-24 are allowed because they are dependent on claims 1, and 19.

Conclusion

5. Claims 1-3, 5, 7-8, and 10-25 are patentable. Pending claims are renumbered as claims 1-22.
